

Tick-Borne Encephalitis / Fröhsummer-Meningoenzephalitis in Europe 2020

The extent of epidemiological assessment of TBE cases varies between countries. The data presented here may therefore not be entirely complete, and it cannot be excluded that TBE viral infection - with subsequent development of the disease - will occur in new areas. This map is based on documented cases of TBE virus infection as well as on detection of the pathogen in nature. Last update: July 2020 - This map is a service by Pfizer Inc.
